

DHL Group

Sustainability & Green Logistics Policy

Document ID: DHL-SUS-POL-2026-007

Version: 2.0 | Effective: February 1, 2026

Classification: Internal | Owner: Group Sustainability

Aligned with: SBTi, CSRD, GHG Protocol

1. Mission Zero & 2030 Targets

DHL Group is committed to achieving net-zero emissions by 2050, with an interim target of reducing GHG emissions by 42% (Scope 1+2) and 25% (Scope 3) by 2030, relative to a 2021 baseline. This policy defines the operational measures required to meet these targets across all business units.

Key 2030 milestones: (a) 60% of last-mile delivery vehicles to be electric, (b) 30% sustainable aviation fuel (SAF) blend for air freight, (c) all new warehouse buildings to be carbon-neutral in operation, (d) 100% renewable electricity for owned facilities.

2. Fleet Electrification

2.1 Electric Vehicle Rollout: All new delivery vehicles ordered from 2026 onward must be electric (BEV) where operationally feasible. Exceptions require Regional Fleet Manager approval and must document why BEV alternatives are not available for the specific use case.

2.2 Charging Infrastructure: Every DHL depot must have charging capacity for at least 50% of its fleet by end of 2027. Charging must use 100% renewable energy from on-site solar or certified green electricity contracts.

2.3 Route Optimization: AI-powered route optimization must be deployed across all last-mile operations. Target: 15% reduction in total kilometers driven through optimized routing, dynamic batching, and consolidation.

2.4 Reporting: Monthly fleet emissions report per depot, including: total km driven (EV vs. ICE), energy consumption per delivery, CO2e per parcel. Data feeds into the Group Sustainability Dashboard automatically.

3. Sustainable Warehousing

3.1 Energy Standards: All new warehouses must meet minimum BREEAM "Excellent" or LEED "Gold" certification. Existing facilities must achieve a minimum Energy Performance Certificate (EPC) rating of B by 2028.

3.2 Solar Installations: All warehouse rooftops exceeding 5,000 sqm must be evaluated for solar panel installation. Target: 200 MW installed capacity across DHL facilities by 2028. Current status: 142 MW (as of Q4 2025).

3.3 LED Lighting: 100% LED lighting with motion sensors is mandatory for all facilities. Retrofit deadline for existing sites: December 2026. Estimated energy savings: 65% compared to conventional lighting.

3.4 Water & Waste: Zero waste-to-landfill target for all warehouses by 2027. Minimum recycling rate: 85%. Water consumption reduction target: 20% by 2028 vs. 2022 baseline. Rainwater harvesting mandatory for new builds.

4. Sustainable Packaging

4.1 Packaging Materials: All DHL-branded packaging must contain minimum 80% recycled content by end of 2026. Plastic tape is being phased out - paper-based tape mandatory from July 2026.

4.2 Right-Sizing: AI-based box recommendation must be used for all e-commerce fulfillment operations. Target: 25% reduction in void fill usage through better box size matching. Current void fill ratio: average 38% (target: <25%).

4.3 Reusable Packaging: Pilot programs for reusable packaging loops are active in Germany, Netherlands, and Sweden. Target: 10 million reusable packages in circulation by end of 2027. Business case: reusable packaging reduces per-shipment packaging cost by 40% after 5 cycles.

5. Carbon Accounting & Reporting

5.1 GHG Protocol Compliance: All emissions must be calculated and reported per the GHG Protocol Corporate Standard. Scope 1 (direct), Scope 2 (market-based), and Scope 3 (categories 1, 3, 4, 6, 7, 9) must be reported

quarterly.

5.2 Customer Carbon Reports: GoGreen Plus reports must be available for all customers on request. Reports include: total emissions per shipment lane, comparison to industry benchmark, verified insetting/offsetting certificates.

5.3 CSRD Compliance: DHL Group reports under the EU Corporate Sustainability Reporting Directive. All operational data must be available for the annual sustainability report by January 31st. Double materiality assessment is updated every 2 years.

5.4 Internal Carbon Price: DHL applies an internal carbon price of EUR 100/tCO₂e for all investment decisions exceeding EUR 1 million. This shadow price must be included in business case calculations for new facilities, fleet purchases, and major contracts.

6. Employee Engagement

6.1 Sustainability Training: All employees must complete a 2-hour sustainability awareness module annually. Covers: climate targets, personal contribution, waste reduction, energy saving behaviors.

6.2 Green Champions Program: Each site appoints at minimum one Green Champion responsible for: local sustainability initiatives, monthly energy/waste reporting, organizing quarterly engagement events, sharing best practices via the Global Green Network.

6.3 Innovation Fund: EUR 5 million annual budget for bottom-up sustainability innovations. Any employee can submit proposals. Evaluation criteria: CO₂e reduction potential, scalability, implementation cost. Top 20 ideas receive funding each year.
